

# Emerald Ash Borer in Vermont

Learn ash tree identification and signs of this invasive pest.

Emerald ash borer (EAB) was first detected in Vermont in 2018, and is now present in 35 states and 5 Canadian provinces. Vermont will lose over 99% of our native green, white, and black ash trees.

## Do you have an ash tree?

- Opposite branches
- Thick twigs
- Diamond shaped bark
- Compound leaves
- Paddle shaped seeds

## Is my ash tree infested with EAB?

Signs include:

Woodpecker activity

Water sprouts

Thinning canopy

S- shaped tunnels
